

Scratch Resistance

Scratch resistance is often a key consideration in the selection process of a customer. Below we've outlined the three main techniques that are found in our products.

Coating

A cured lacquer coating offers basic scratch resistance, providing a protective layer against daily wear and tear while maintaining a sleek appearance. Often associated with our Timber Solutions.

PVC Layer

With a durable PVC layer, this enhances scratch resistance, guarding against more significant wear and tear, ensuring longevity and maintaining a pristine finish. Often associated with our Resilient Solutions.

Melamine Resin

Providing unparalleled protection against scratches and abrasions, this resilient surface ensures a long-lasting, scratch-free appearance. Ideal for high-traffic areas and often associated with our Laminate Solutions.

Top Three Collections

1. Laminate - Shield
2. Laminate - Hydro
3. Laminate - Classic
