

Sound Rating

Reflective noise is experienced when you walk on a completed flooring system. The amount of noise you hear will depend on several factors, including the type of flooring and the accompanying underlay selected. Other factors include the environment where the flooring is installed and any specific building regulations that need to be adhered to.

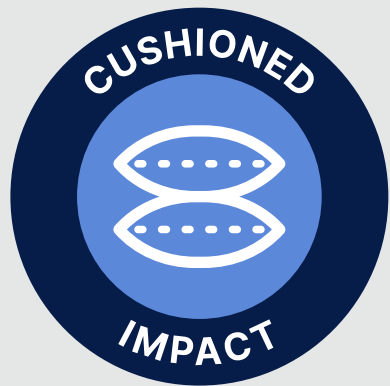

The overall combination will give an AAAC sound rating. A 6-star rating can reduce the rebound noise by up to 40%.

Product	LnT, w ≤	AAAC Rating
Concrete Floor	56	2 Star
Laminate - Hydro - Origin (12mm)	42	5 Star
Resilient - Hybrid - Fusion (6mm)	35	6 Star
Timber - Oak - Luxury (20mm)	42	5 Star

*All products paired with 2mm Comfort Underlay.
*6-star ratings can be achieved with upgrading your underlay.

Cushioning

Cushioning is also built into some flooring products, like vinyl, to provide additional shock and sound absorption.
